

The automated declassification & redaction solution

VeriDact™ PRO is an off-the-shelf standalone or server based software package that automates the redaction of words, phrases or normal expressions. With the ever-increasing need for monitoring of highly-classified information, VeriDact™ PRO is a must-have for both government agencies and commercial companies. VeriDact™ PRO is ideal for redaction applications where the images have already been scanned and for large documents.

❖ Redact Words, Sentences, Whole Pages or Sections

Redact words, sentences, sections or whole pages

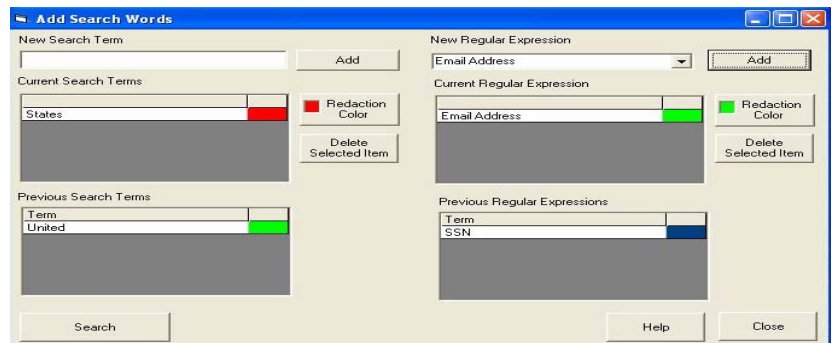

By use of its front end “dirty words list” interface, VeriDact™ PRO automatically identifies the words, phrases, sections or pages specified in the “list” for redaction. The software also provides automatic word removal across multiple pages of a single document or across multiple documents.

❖ Regular Expressions & Adhoc Redaction

Regular Expressions & Adhoc Redaction

VeriDact™ PRO can automatically search and redact regular expressions (i.e., SSN #'s, Dates, and email addresses). Other expressions can be pre-defined in the initial system rule set. As shown in the screenshot below, the analyst / user can add words or phrases after the initial search through the “dirty words list” portal has been completed.

❖ Save the original, the Audit Copy, the Working copy, and/ or the Redacted version

Save the original, the Audit Copy, the Working copy, and/ or the Redacted version

As depicted in the screen shot below, the user has the option to save any combination of the original, the audit copy, the working copy and the redacted image. The audit copy shows the words that are to be redacted by placing a translucent box around the word or phrase intended for redaction. The Working Copy shows the attended redactions but also provides bookmarks.

❖ Create Bookmarks

❖ View Thumbnails,

❖ Zoom in or out

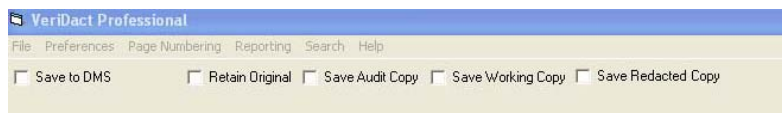

❖ Re-order & Delete pages

❖ Rotate & Invert pages

❖ Set colors for pre-redaction viewing

❖ Add Bates Stamps, Annotations & other stamps

❖ Provide Analyst Review & Approval

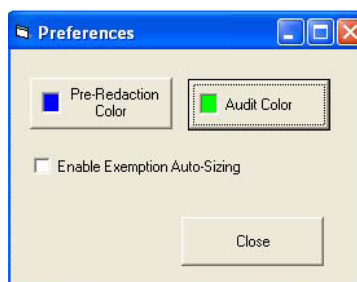

Create Bookmarks

For large documents, the user may wish to bookmark a page or section in order to return to that page or section at a later date. Some documents are too large for the review to be completed in one day, and this feature offers the analyst the ability to save his previous, original work.

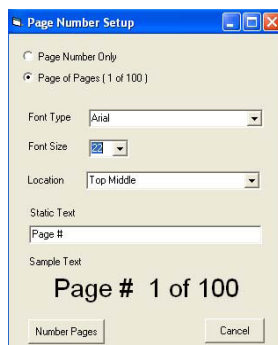

View Thumbnails, Zoom, re-order, delete, rotate, an invert pages

VeriDact Pro offers the user the ability to view image thumbnails. With this function, the analyst may wish to change the order of the pages or delete a page. They may wish to examine a particular portion of the page, and the zoom feature allows the user to concentrate just on the interesting area. If the image has been scanned without image orientation adjusted correctly, the operator has the ability to rotate the page or invert it.

Set colors for pre-redaction viewing

VeriDact Pro provides the user that functionality of being able to set the pre-redaction color. This feature offers that ability for different users or departments to hone in on their own redaction review responsibilities

Add Bates Stamps, Annotations & other stamps

The feature allows the user to add a user-defined string of unique identifiers to the image. This character string can include Bates Stamps, date & time stamps, or any alpha numeric string of characters in order to provide page retrieval. The annotations can be static in nature; can be auto-incrementing; or can be in custom combination of letters and numbers.

Provide analyst review and approval for each redaction

Once the document or documents have been targeted for redaction, a draft version of the document is sent to a review/analyst station for validation and verification. Each word, phrase, or concept proposed for redaction is highlighted in gray. The analyst can resize or move the redaction area, delete the area, add new areas, and add other properties such as exemption codes.

Offer black-out, white with black border or white-out redactions

The User / Analyst has the choice of redacting in either black or white. Other annotations may be made in any of a number of colors. See a black-out redaction example below:

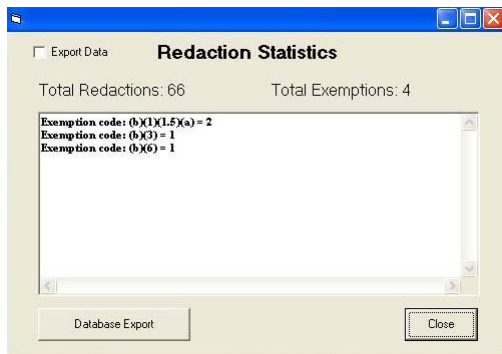

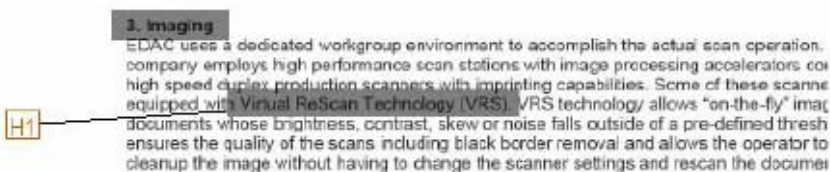

EDAC's facility in Fredericksburg, VA offers a secure location with dedicated spaces for pl document storage, scanning operations, and validation processes. Our experienced staff i to manage and operate the project with precise control. Along with this experience comes confidence of security clearances ranging from public trust to Top Secret.

Assign general exemption codes or customize your own

Each redaction may have an exemption code or other annotation associated with it. These codes may be pre-defined by a rule set, or can be customized for an individual document or usage. The codes are auto-sized to fit within the redaction box.

See screenshot below:

Create Exemption Redaction Reports

VeriDact *Pro* tracks the number of total exemption codes and the individual uses of each code. These statistics may be used to generate a report or to export to a database or spreadsheet.

Integrates with ODBC compliant databases and document management systems

VeriDact™ *PRO* is able to directly release the original and/or the redacted copy directly into numerous Document Management and Universal Content Management Systems (i.e. Stellent, Documentum, Hummingbird, iManage, TRIM, and others) and any ODBC compliant database.

VeriDact™ *PRO* Supports:

- ❖ Image formats such as TIFF and PDF

- ❖ Offer Black-out, White-out with Black Border, or White-out Redactions

- ❖ Assign General Exemption Codes & Auto-size the Exemption Code to fit within the Redaction Box

- ❖ Create Exemption Code Reports

- ❖ Integrates with ODBC Compliant Databases & DMS's
